

Kaymich

A World of Solutions

Kaymich

About Kaymich

As world leaders and innovators in adhesive and fluid application solutions for over 30 years, Kaymich have always delivered on our promise: To provide excellence in quality, guaranteed reliability and proven technology through continuous development and ongoing investment in our people, our service and in our comprehensive product portfolio.

Kaymich have the size, stability and support network to ensure that wherever you are in the world our promise will always be kept.

A successful company, or product, will always attract imitators or counterfeiters.

When you specify Kaymich, you choose the original. You choose the best.

Kaymich Product Areas:

Flavour Application

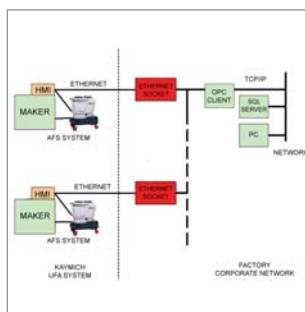

AFS1000

Advanced Flavouring System

The AFS1000 Advance Flavouring System has been designed to apply an extensive range of liquid flavours through three different choices of application points, onto the paper on the cigarette maker, into the tobacco on the cigarette maker or into the tow on the filter maker. The AFS1000's advanced software offers the most intelligent and versatile flavouring unit available on the market today.

The AFS1000 offers many benefits and features, that aid today's demanding production requirements.

- User Friendly - 17" Touch screen with animated icons and easy to follow set up procedures
- Greater versatility - A wide choice of settings and parameters, including language option
- Advanced quality control - Flow meter ensures correct dosage amount
- High capacity pump - New pump design is capable of 1500ml/min
- Easy set up - touch screen controls with on-line trouble shooting facility
- Easy to use - quick release at all points (tanks and hose)

DC1A

Data Collection System

Data Collection is a software feature that provides remote access, via Ethernet to the AFS1000's and making machine's "live" information.

The AFS1000's Human Machine Interface (HMI) is fitted with an Ethernet socket, that enables connection to an existing network or stand alone PC. Both the AFS1000 and maker data is transferred over the Ethernet (TCP/IP) using an OLE for process control (OPC) The HIM acts as an OPC server while the factory network's PC/servers act as OPC clients.

RH1A

Remote Heating System

An off line system designed to complement the Kaymich Advanced Flavouring Application System and the Universal Flavour Application System. The RH1A provides a means of storing, heating and melting flavours where high consumption is required in the cigarette, filter or cigar manufacturing process.

Cigarette Rod Making

CSS1000

Cigarette Side Seam Adhesive Application System – Gravity/Pump

Cigarette Side seam adhesive Application System. Gravity/Pump

The nozzle side seam adhesive application system was developed by Kaymich to apply synthetic resin emulsion based adhesive in place of the starch based system. The Kaymich Positive Pump Feed System is designed for the latest high speed machinery. The system is designed to allow cigarette manufacturers greater flexibility in the material they can use including liquid natural starch adhesives.

Cigarette Tipping

TPA3000

Tipping Paper Adhesive Applicator

The Kaymich TPA3000 Cigarette Tipping Paper Applicator is designed to give superior bonding, improved ventilation control and increase the productivity of a range of cigarette tipping machines.

Cigarette Packing

SG Spray Valves

The Kaymich SG Spray Valve are fitted as standard by many of the leading manufactures of packing machinery. Operating at 1,500 cycles per minute, the SG valve is clean, reliable and efficient.

MV Miniaturised Spray Valves

The MV series Miniaturised Spray Valve retains many of the features of the original SG valve but offers a higher operating speed, greater versatility and cleaner running.

JV JETTING VALVE

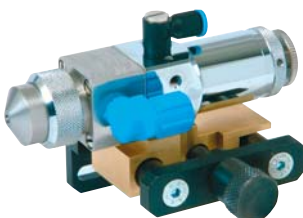

The JV series jetting is designed to meet the requirements of today's high speed packing machinery

Filter Rod Making

GFH2000/PFH2000

Filter Rod Adhesive Application System

The GFH2000/PFH2000 Filter Rod Adhesive Application System is the most versatile and efficient system for applying hot melt and PVA adhesive to filter rod available today. The unique back-plate design enables the system to be configured for a variety of different applications providing hot melt, supplementary PVA for plug security, multiple lines for tow retention or the Kaymich FTS2000 Spray Tow Retention.

FTS2000

Spray Tow Retention

The FTS2000 is designed to apply a wide coverage of adhesive without significantly reducing the paper coresta or affecting rod quality and diameter.
